

I live in Clintwood, Virginia. I support HB832 and many people around want everyone to have access to solar in SWVA.. There is Code Red warning for humanity issued by the UN because of the tremendous impact of global warming, I urge the committee to take every step they can to help the people and the planet. Going with clean energy as fast as we can is needed. Jobs, economic development and household savings are important and this bill can insure progress on those fronts for SWVA.
